

WatchGuard® SpamScreen

A Firebox® X Core™ Security Service

The Integrated, Affordable, and Customizable Spam Blocking Service

Spam email costs you time and money by tying up mail server and network resources and decreasing employee productivity. Security analysts estimate that over 63% of Internet email today is spam, and that percentage is increasing. IT departments are challenged with deploying and maintaining an effective spam blocking solution painlessly and affordably.

Existing spam blocking solutions can require you to purchase a separate server and software licenses for each user on your network, making them expensive to set up and difficult to maintain.

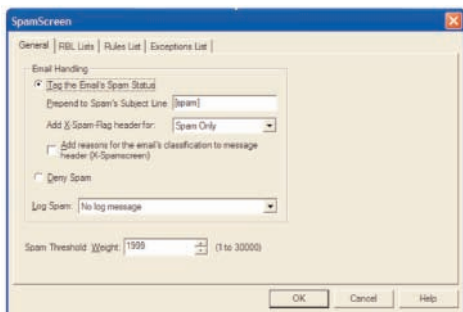

For WatchGuard® Firebox® X Core™ owners, there's a better solution:

- SpamScreen easily integrates into your existing Firebox® X Core™ appliance – no extra hardware is needed. It's priced per appliance, not per user, so you avoid the expensive licensing. Activation with a software license key makes it even more affordable.
- A multi-layered filtering approach stops spam at the gateway to protect you before spam email enters your network.

Intuitive, Integrated Management

Access all spam blocking tools in WatchGuard® System Manager for easy, intuitive control and logging. SpamScreen lets you decide what's defined as spam.

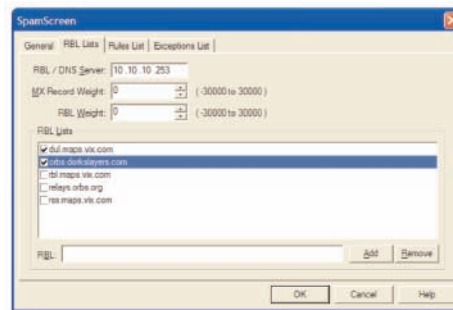

Flexible Spam Handling

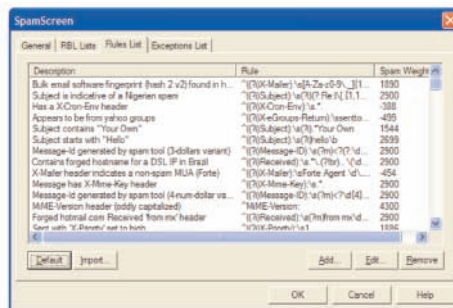

- Simple configuration makes spam management quick and easy.
- Delete spam at the Firebox X or tag and forward it to an email address for quick identification and sorting.
- Select the level of logging and reporting you need using the built-in Log Viewer, which logs all denied email to maintain a record of filtered messages.

Easy Spam Filter Configuration

- Configure additional Real-time Blackhole Lists and use a global network of known DNS blacklists.

- Create custom whitelists for safe email from customers, partners, or important news sources.
- Generate blacklists to block by IP address or sender name.

Flexible Custom Rules

- Use rulesets from community lists or create your own to customize the level of spam filtering.
- Generate rulesets for keywords and known spam signatures in subject lines and SMTP header information.
- Add individual rules, modify existing ones, or import rulesets from newsgroups or other sources.

How It Works

- SpamScreen checks the source of each incoming SMTP email against Real-time Blackhole Lists (RBLs) of questionable sources, and against your custom rulesets and blacklists.
- When a filtering match is found and the email source is identified as a spam source, you are given three options for handling the email message: Deny, Allow, or Allow and Tag the email message with a warning to the addressee that it is suspicious.
- You can define exceptions to the WatchGuard spam signatures list, allowing email from specific addresses or address patterns that may otherwise be blocked.

Expand Firebox X Core with More Services and Upgrades

Add features and services to your Firebox® X Core™ to expand your security appliance as your needs grow. Get URL filtering with WebBlocker, more network ports, Mobile User VPN upgrades, or renew your LiveSecurity® Service subscription. With WatchGuard® solutions, you can get on with your work and rest assured that your network is protected.

SpamScreen for Firebox® X Core™

Firebox® X500

SpamScreen 1-Year Renewal	WG017106

Firebox® X2500

SpamScreen 1-Year Subscription	WG017101
SpamScreen 1-Year Renewal	WG017107

SpamScreen System Requirements

- WatchGuard® Firebox® X Core™ running WatchGuard System Manager 7.2 or later
- WatchGuard Firebox System (WFS) operating system*
- Microsoft® Windows 2000, Windows NT, or XP to support WatchGuard System Manager
- Active LiveSecurity® Service subscription for the latest features
- Locally hosted SMTP mail server

The Power of Unified Threat Management

Network attacks cost businesses huge amounts of time and money. Hackers launch ever more sophisticated assaults daily and no protocol is immune from the threat.

With so many dangers to the network to protect against, businesses of all sizes are turning to the multi-layered security of Unified Threat Management (UTM) solutions to keep networks safe.

WatchGuard's Firebox X family of security appliances provides the most complete unified threat management – from hardware to software services – for fully integrated, multifaceted network protection from spyware, spam, viruses, worms, trojans, Web-based exploits, and blended threats. Our suite of integrated security services includes:

- * **SpamScreen.** Provides multi-layered filtering approach to stop spam at the gateway.
- * **Gateway AntiVirus for E-mail.** Boost protection at the gateway with this powerful, signature-based security service.
- * **WebBlocker.** Increase productivity and lower security risks by managing your users' Web surfing with this URL filtering service.

Each service is easy to install and manage with WatchGuard System Manager. Integrated seamlessly with the proprietary Intelligent Layered Security architecture of the Firebox X, they provide powerful security while keeping the cost of ownership low and IT productivity high.

FREE!

30-day trial

Get a free 30-day trial of **SpamScreen** when you purchase a Firebox X Core. Call your reseller for details.
