

WatchGuard showcases new XCS platform at CeBIT 2010

4 February 2010: At CeBIT 2010, network security specialist, WatchGuard Technologies is featuring its latest range of products for small and medium sized companies as well as solutions for large enterprises. The focus will be on WatchGuard's new XCS, eXtensible content Security platform along with its comprehensive range of multi-function UTM and XTM (eXtensible Threat Management) Appliances that bring together WatchGuard's award-winning Firewall, along with email, messaging, Cloud and Web 2.0 security to deliver protection from existing and next generation threats.

WatchGuard will be showcasing its new products and technology on the stand of its German distributor, Wick Hill that is twice the size of last year's CeBIT stand. The stand number is: D03 in Hall 11

"The XCS series has a multilayered security architecture that helps enterprises protect themselves against increasing risks from email and web use," explains Michael Haas, Regional Sales manager at WatchGuard Technologies. "These advanced content management solutions help larger enterprises to comply with industry regulations and legislations, while competitive pricing also makes them attractive and affordable for SMBs."

WatchGuard unveiled its next generation of integrated security solutions, with eXtensible Threat management (XTM) at last year's CeBIT. These high performance, scalable appliances offer investment protection, along with the highest security standards.

XTM includes Virtual Private Networking (SSL VPN), Advanced Web (HTTP and HTTPS), filters for applications and content as well as a spam blocker and security for VoIP (SIP and H.323). The new XTM 8 and 10 series appliances include all of these extended functions and are ideal for enterprises, data centres and other High performance network environments.

DualQuad core processors and extended Crypto Acceleration hardware enable up to 10 Gbps Firewall and 2Gbps VPN information flow-rates.

The WatchGuard XCS platform, integrates messaging and content security to provide comprehensive protection for any size of business. XCS provides complete email safety, even protecting against the increase in Blended Threats – emails that contain web links to malware. Along with its complete email security, the XCS platform also provides extensive management and documentation possibilities.

“The easy to manage products of the XCS family are designed to meet the needs of the SME as well as large companies. For the larger organisation, new and increasingly complex Regulations and Compliance requirements are met. The highest performance models of the WatchGuard XCS platform are designed for 100 up to over 10, 000 users. These not only offer fail safe and the highest level of protection against the next generation of security threats, but also control and efficient management of message and web content. All XCS solutions benefit from innovative in-the-cloud technology service from WatchGuard - the ReputationAuthority, which eliminates spam before it penetrates the network.

About WatchGuard Technologies, Inc.

Since 1996, WatchGuard® Technologies, Inc. has been the advanced technology leader of business security solutions, providing mission-critical protection to hundreds of thousands of businesses worldwide. The WatchGuard family of wired and wireless unified threat management appliances, messaging, content security and SSL VPN remote access solutions provide extensible network, application and data protection, as well as unparalleled network visibility, management and control.
