

WatchGuard showcases new XTM and XCS appliances at Infosecurity Europe 2010

15 March 2010: At Infosecurity Europe 2010, WatchGuard Technologies is featuring its latest range of multifunction network security solutions for SMEs and large enterprises. The focus will be on WatchGuard's new XCS (eXtensible content Security) platform for email and Web 2.0 security, along with its latest XTM (eXtensible Threat Management) 2 and 5 Series appliances that combine WatchGuard's award-winning Firewall with gateway antivirus, IPS/IDS, web-blocking and URL filtering to deliver comprehensive defence and in depth protection.

WatchGuard will be showcasing these new products and its full range of security solutions on 27-29 April at London's Earls Court, London during Infosec on its "Get red Get SecuRED" stand number E46.

The new WatchGuard XTM 5 Series is aimed at mid size organisations with up to 1,500 users while the XTM 2 Series is ideal for small businesses with up to 50 users. All XTM appliances offer Virtual Private Networking (SSL VPN), advanced web (HTTP and HTTPS) filters for applications and content as well as a spam blocker and security for VoIP (SIP and H.323). With the latest XTM 2 and 5 Series, WatchGuard now offers integrated and flexible network, application and data security solutions for any size of organisation from SMEs up to enterprise and data centre environments with the powerful XTM 8 Series and XTM 10 Series.

The new WatchGuard XCS platform provides comprehensive messaging and content security, even protecting against the increase in Blended Threats – emails that contain web links to malware. All XCS solutions benefit from the innovative in-the-cloud WatchGuard ReputationAuthority (3rd Generation) service, which eliminates up to 98% of spam at the gateway, before it penetrates the network. Along with complete email security, the XCS platform also provides data leakage prevention (DLP) capabilities and extensive management and documentation possibilities.

The XCS series has a multilayered security architecture that helps enterprises protect themselves against increasing risks from email and web use.

The easy to manage XCS appliances are designed to meet the needs of SMEs as well as large companies with over 10,000 users that need to meet increasingly complex Regulations and Compliance requirements. And with unlimited licensing based on throughput rather than the number of users, the XCS range offers competitive pricing and the flexibility to be scaled without incurring further costs.

About WatchGuard Technologies, Inc.

Since 1996, WatchGuard® Technologies, Inc. has been the advanced technology leader of business security solutions, providing mission-critical protection to hundreds of thousands of businesses worldwide. The WatchGuard family of wired and wireless unified threat management appliances, messaging, content security and SSL VPN remote access solutions provide extensible network, application and data protection, as well as unparalleled network visibility, management and control. WatchGuard products are backed by WatchGuard LiveSecurity® Service, an innovative support, maintenance, and education program. WatchGuard is headquartered in Seattle and has offices serving North America, Europe, Asia Pacific, and Latin America. To learn more, visit <http://www.watchguard.com/>.
