

Gateway AntiVirus/Intrusion Prevention Service

An integrated security subscription for Firebox® X e-Series appliances

Gateway AntiVirus/Intrusion Prevention Service (Gateway AV/IPS) is a fully integrated security subscription for Firebox X e-Series appliances. It works in tandem with the application layer content inspection of the Firebox to provide real-time protection against known spyware, viruses, application exploits, and blended threats.

Why add a Gateway AV/IPS subscription?

Gateway AV/IPS scans traffic on all major protocols, using continually updated signatures to detect and block threats that are delivered in non-suspicious formats.

And because Gateway AV/IPS is integrated with the Firebox X security appliance, you have an easy-to-manage, cost-effective solution without additional hardware to purchase and maintain.

Having a single, **all-in-one security** solution "... has made our internal IT department's work **considerably easier.**"

Martin Korn
Head of IT & Central Service
Novoferm GmbH

What Gateway AV/IPS Does for Your Network and Your Business

Email-borne viruses, worms, and trojans are stopped at the gateway

- SMTP and POP3 traffic is scanned at the gateway to stop threats before they gain access to your servers and execute their dangerous payloads
- Suspect email can be flagged to go into quarantine, where administrator can restrict access or allow users to review quarantined files through automatic email alerts
- Compressed and encoded files attached to emails are decompressed for inspection, with wide compression support including ZIP, TAR, and GZIP files

Network intrusions are identified and blocked

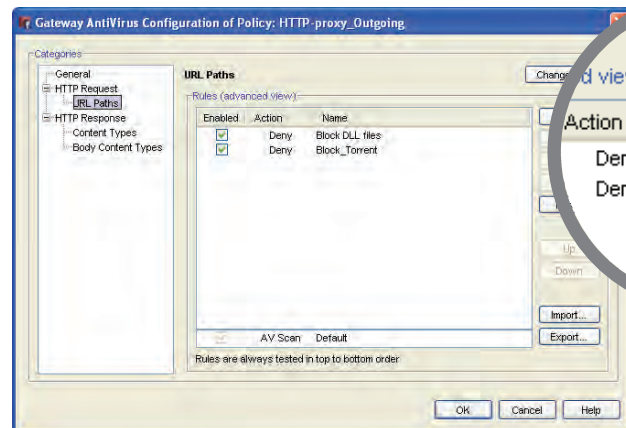

- Scans all major protocols, including HTTP, HTTPS, FTP, DNS, TCP, SMTP, and POP3 to block network, application, and protocol-based attacks
- Keeps spyware out of the network by blocking known spyware IP addresses, drive-by spyware attempting to enter the network as a result of web surfing, and spyware attempting to contact its host
- Blocked sites list ensures that once an IP address is positively identified as the source of an attack, future attacks coming from that address are dynamically blocked
- Continually updated signature database ensures timely, far-reaching coverage

Management is easy and includes centralized policy enforcement

- Manage all security functionality on your Firebox X appliance, including Gateway AV/IPS, from a single intuitive console for maximum efficiency and ease of use
- All security activity identified by Gateway AV/IPS is logged and stored for easy reporting so you can take immediate preventive or corrective action
- Have the flexibility to define the action to be taken when malware is identified – enabling the network to allow, block, or lock questionable traffic based on type, user/group, protocol, and severity

Cost-Effective Web Filtering

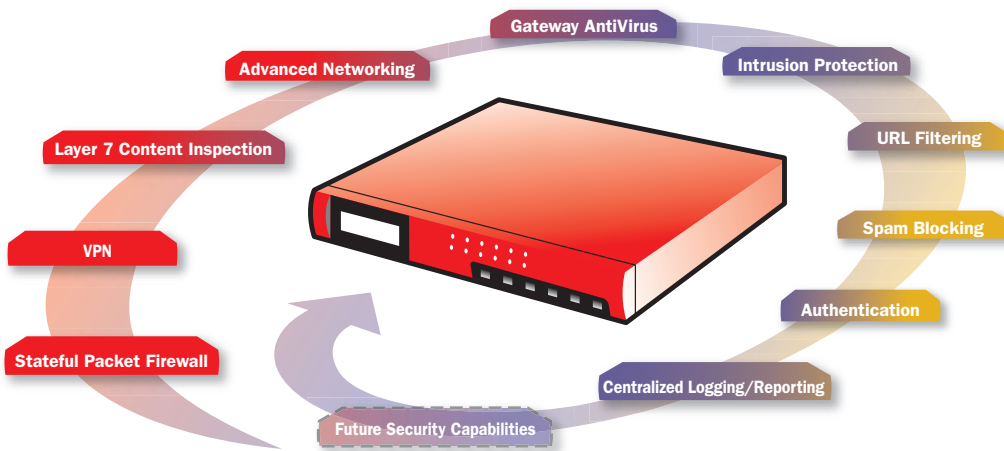

- Provide network-wide protection for all users configured behind your Firebox X firewall with a single Gateway AV/IPS subscription
- Purchase Gateway AV/IPS bundled with our suite of powerful security subscriptions for even greater savings

Configuring Gateway AV/IPS is easy. Define the action to be taken using an intuitive interface.

Fully Integrated Security for Comprehensive Protection

All-in-One Security Solution

Firebox X appliances combine with powerful security subscriptions to offer comprehensive protection from malware. All security capabilities are managed from one intuitive console, with centralized logging and reporting features for an up-to-the-minute view of network security activity.

Because the threat landscape is always changing, WatchGuard XTM and Firebox X solutions are designed to be able to easily add new network defense capabilities through security subscriptions, so costly hardware upgrades are not necessary.

Buy the Bundle and Get the Works

Get everything you need for complete unified threat management in one convenient package, including firewall, VPN, security subscriptions, and technical support with a UTM Bundle from WatchGuard®.

Each UTM Bundle includes:

- Choice of Firebox X e-Series appliance (Peak, Core, or Edge)
- spamBlocker with virus outbreak detection
- WebBlocker with HTTP and HTTPS inspection
- Gateway AntiVirus/Intrusion Prevention Service for signature-based protection from known threats
- LiveSecurity® Service for hardware warranty, free software updates, 24/7 technical support, security alerts, and educational resources

From initial purchase through ongoing security management, the bundle makes network security easier and more efficient. You get a complete solution at an excellent price, with no additional fees, contracts, or hardware to purchase.

One-year, two-year, and three-year subscription packages available.

Got the Box? Get the UTM Software Suite

Turn your Firebox X appliance into a complete unified threat management solution by adding the UTM Software Suite. It's an efficient, cost-effective way to have complete protection from a host of Internet attack vectors, with all your network security managed from one centralized console. The suite also includes an industry-leading customer care package with 24/7 technical support.

Each UTM Software Suite* includes:

- spamBlocker
- WebBlocker
- Gateway AntiVirus/Intrusion Prevention Service
- LiveSecurity® Service

A great deal when you buy together and save!

*UTM Software Suite does not include appliance.
