WebBlocker Server v1.0
Release Notes

Build Number	572286
Release Date	28 August 2018
Release Notes Revision Date	14 January 2019

Introduction

WatchGuard is pleased to announce the release of WebBlocker Server v1.0. This is the debut release of an on-premises server for WebBlocker with WebSense Cloud.

WebBlocker with WebSense Cloud supports a wider and better variety of categories than the WebBlocker previously available for local installation with WatchGuard System Manager.

Get Started with WebBlocker Server

WatchGuard WebBlocker Server must be installed on a virtual machine with a 64-bit OS. It can be installed on VMware or on Hyper-V. You can find installation instructions in Fireware Help at Install the WebBlocker Server.

In most environments, WebBlocker will perform extremely well with WebSense Cloud, without the need for a local installation of WebBlocker Server. Evaluate WebBlocker performance in your environment before you make the decision to install WebBlocker Server.

You can use the on-premises WatchGuard WebBlocker Server for any Firebox with Fireware v12.2 or later with an active WebBlocker license.

To learn more about WebBlocker Cloud and other WebBlocker options, see
https://www.watchguard.com/help/docs/help-center/en-US/Content/en-US/Fireware/services/webblocker/wb_server_manage_c.html.

Technical Assistance

For technical assistance, contact WatchGuard Technical Support by telephone or log in to the WatchGuard website at https://www.watchguard.com/support. When you contact Technical Support, you must supply your registered Product Serial Number or Partner ID.
