Fireware XTM v11.7.4 Update 1 Release Notes

Supported Devices	XTM 3, 5, 8, 800, 1500, and 2500 Series XTM 25, XTM 26, XTM 1050, XTM 2050 XTMv, WatchGuard AP
Fireware XTM OS Build	428850
WatchGuard System Manager Build	426192
Revision Date	29 August 2013

Introduction

On the 29th of August, WatchGuard released an update to Fireware XTM v11.7.4 to resolve an issue with the Gateway AntiVirus service, as detailed in the Resolved Issues section. Fireware XTM v11.7.4 Update 1 replaces Fireware XTM v11.7.4 in the WatchGuard Portal. There is no update to WatchGuard System Manager v11.7.4.

WatchGuard is pleased to announce the release of Fireware XTM v11.7.4 and WatchGuard System Manager v11.7.4. With this release, we are pleased to release a large number of bug fixes and small enhancements. For more information about the bug fixes included in this release, see the Resolved Issues section. New or enhanced features for our WatchGuard XTM devices include:

- Enhanced DHCP Options support, including:
  - Support for DHCP option 66 (TFTP Server Name)
  - Support for DHCP options on VLAN, Link Aggregation, and Bridge interfaces
- Expanded 3G/4G modem failover support, including:
  - Support for new modems: Sierra Wireless AirCard 313U and Verizon Wireless LTI USB551L
  - Support for 3G/4G modems on XTM 330 and XTM 5 Series devices
- spamBlocker improvements, leveraging technology from Commtouch:
  - Higher efficacy and reduced false positives measured in testing
  - UI updated for Bulk mail handling, Virus Outbreak Detection, and Proactive Patterns
- The Mobile VPN with SSL download page now provides a Mobile VPN with SSL client profile as a .ovpn file.
- When you configure the web server to use for hotspot external guest authentication, you can now specify the session timeout and idle timeout values for user hotspot sessions.
- In the Gateway Wireless Controller, the default WatchGuard AP radio setting for Channel HT Mode has been changed from 20/40 MHz to 20 MHz.

If you use spamBlocker and experience false negative or false positive spam that you would like to report to help us improve spam efficacy even further, see WatchGuard Knowledge Base article 2372.

For detailed information about the feature enhancements included in Fireware XTM v11.7.4, see the product documentation or review What's New in Fireware XTM v11.7.4.

Before You Begin

Before you install this release, make sure that you have:

- A supported WatchGuard XTM device. This device can be a WatchGuard XTM 2 Series (models 25 and 26 only), 3 Series, 5 Series, 8 Series, 800 Series, XTM 1050, XTM 1500 Series, XTM 2050 device, XTM 2500 Series, or XTMv (any edition).
- The required hardware and software components as shown below. If you use WatchGuard System Manager (WSM), make sure your WSM version is equal to or higher than the version of Fireware XTM OS installed on your XTM device and the version of WSM installed on your Management Server.
- Feature key for your XTM device — If you upgrade your XTM device from an earlier version of Fireware XTM OS, you can use your existing feature key. If you use XTMv, your feature key must be generated with the serial number you received when you purchased XTMv.

Note that you can install and use WatchGuard System Manager v11.7.x and all WSM server components with devices running earlier versions of Fireware XTM v11. In this case, we recommend that you use the product documentation that matches your Fireware XTM OS version.

If you have a new XTM physical device, make sure you use the instructions in the *XTM Quick Start Guide* that shipped with your device. If this is a new XTMv installation, make sure you carefully review the *XTMv Setup Guide* for important installation and setup instructions.

Product documentation for this product is available on the WatchGuard web site at www.watchguard.com/help/documentation.

Localization

This release includes an update to the localized management user interfaces (WSM application suite and Web UI) and product help. Both the user interfaces and product help have been updated with content for Fireware XTM v11.7.2. Supported languages are:

- Chinese (Simplified, PRC)
- French (France)
- Japanese
- Spanish (Latin American)

In addition to these languages, we offer localized Web UI support for Korean and Traditional Chinese. Only the Web UI itself has been localized. WSM, and all help files and user documentation, remain in English for these two languages.

Note that most data input must still be made using standard ASCII characters. You can use non-ASCII characters in some areas of the UI, including:

- Proxy deny message
- Wireless hotspot title, terms and conditions, and message
- WatchGuard Server Center users, groups, and role names

Any data returned from the device operating system (e.g. log data) is displayed in English only. Additionally, all items in the Web UI System Status menu and any software components provided by third-party companies remain in English.

Fireware XTM Web UI

The Web UI will launch in the language you have set in your web browser by default. The name of the currently selected language is shown at the top of each page. To change to a different language, click the language name that appears. A drop-down list of languages appears and you can select the language you want to use.

WatchGuard System Manager

When you install WSM, you can choose what language packs you want to install. The language displayed in WSM will match the language you select in your Microsoft Windows environment. For example, if you use Windows 7 and want to use WSM in Japanese, go to Control Panel > Regions and Languages and select Japanese on the Keyboards and Languages tab as your Display Language.

WebCenter, Quarantine Web UI, and Wireless Hotspot

These web pages automatically display in whatever language preference you have set in your web browser.

Fireware XTM and WSM v11.7.4 Operating System Compatibility

Revised August 2013

WSM/ Fireware XTM Component	Microsoft Windows XP SP2 (32-bit) & Vista (32 &64-bit)	Microsoft Windows 7 and 8 (32-bit & 64-bit)	Microsoft Windows Server 2003 SP2 (32-bit)	Microsoft Windows Server 2008 & 2008 R2	Microsoft Windows Server 2012 (64-bit)	Mac OS X v10.5, v10.6, & v10.7, v10.8	Mobile Devices: Android 4.x & higher, iOS
WatchGuard System Manager Application	✓	✓	✓	✓	✓		
Fireware XTM Web UI *Supported Browsers: IE 7, 8, 9, Firefox 3.x & above*	✓	✓	✓	✓	✓	✓	
WebCenter Web UI *Supported browsers: Firefox 3.5 & above, IE8 & above, Safari 5.0 & above, Chrome 10 & above. Javascript required.*	✓	✓	✓	✓	✓	✓	
WatchGuard Servers	✓	✓	✓	✓	✓		
Single Sign-On Agent Software (Includes Event Log Monitor)			✓	✓	✓		
Single Sign-On Client Software	✓	✓	✓	✓	✓		
Terminal Services Agent Software*			✓	✓	✓		
Mobile VPN with IPSec Client Software	✓	✓				✓ **	✓ **
Mobile VPN with SSL Client Software	✓	✓	✓			✓	✓

Notes about Microsoft Windows support:

- *For Microsoft Windows Server 2008, we support both 32-bit and 64-bit support. For Windows Server 2008 R2, we support 64-bit only.*
- *Windows 8 support does not include Windows RT.*

Browser compatibility:

- *Fireware XTM Web UI is supported on IE 7, 8, and 9, and Firefox 3.x and above.*
- *WebCenter Web UI is supported on IE 8 and above, Firefox 3.5 and above, Safari 5.0 and above, and Chrome 10 and above. Javascript is required.*

** Terminal Services support with manual or Single Sign-On authentication operates in a Microsoft Terminal Services or Citrix XenApp 4.5, 5.0, 6.0 and 6.5 environment.*

*** Native (Cisco) IPSec client is supported for Mac OS and iOS.*

Authentication Support

This table gives you a quick view of the types of authentication servers supported by key features of Fireware XTM. Using an authentication server gives you the ability to configure user and group-based firewall and VPN policies in your XTM device configuration. With each type of third-party authentication server supported, you can specify a backup server IP address for failover.

✓ *Fully supported by WatchGuard*  *Not yet supported, but tested with success by WatchGuard customers*

	Active Directory[1]	LDAP	RADIUS[2]	SecurID[2]	Firebox (Firebox-DB) Local Authentication
Mobile VPN with IPSec/Shrew Soft	✓	✓	✓[3]	–	✓
Mobile VPN with IPSec for iPhone/iPad iOS and Mac OS X				✓	✓
Mobile VPN with IPSec for Android devices	✓	✓	✓	–	✓
Mobile VPN with SSL for Windows	✓	✓	✓[4]	✓[4]	✓
Mobile VPN with SSL for Mac	✓	✓	✓	✓	✓
Mobile VPN with L2TP	✓[6]	–	✓	–	✓
Mobile VPN with PPTP	–	–	✓	N/A	✓
Built-in Authentication Web Page on Port 4100	✓	✓	✓	✓	✓
Windows Single Sign-On Support *(with or without client software)*	✓	–	–	–	–
Terminal Services Manual Authentication	✓				✓
Terminal Services Authentication with Single Sign-On	✓[5]	–	–	–	–
Citrix Manual Authentication					✓
Citrix Manual Authentication with Single Sign-On	✓[5]	–	–	–	–

1. *Active Directory support includes both single domain and multi-domain support, unless otherwise noted.*
2. *RADIUS and SecurID support includes support for both one-time passphrases and challenge/response authentication integrated with RADIUS. In many cases, SecurID can also be used with other RADIUS implementations, including Vasco.*
3. *The Shrew Soft client does not support two-factor authentication.*
4. *Fireware XTM supports RADIUS Filter ID 11 for group authentication.*
5. *Both single and multiple domain Active Directory configurations are supported.For information about the supported Operating System compatibility for the WatchGuard TO Agent and SSO Agent, see the current Fireware XTM and WSM Operating System Compatibility table.*
6. *Active Directory authentication methods are supported only through a RADIUS server.*

System Requirements

	If you have WatchGuard System Manager client software only installed	If you install WatchGuard System Manager and WatchGuard Server software
Minimum CPU	Intel Pentium IV 1GHz	Intel Pentium IV 2GHz
Minimum Memory	1 GB	2 GB
Minimum Available Disk Space	250 MB	1 GB
Minimum Recommended Screen Resolution	1024x768	1024x768

XTMv System Requirements

With support for installation in both a VMware and a Hyper-V environment, a WatchGuard XTMv virtual machine can run on a VMware ESXi 4.1 or 5.0 host, or on Windows Server 2008 R2, Windows Server 2012, Hyper-V Server 2008 R2, or Hyper-V Server 2012.

The hardware requirements for XTMv are the same as for the hypervisor environment it runs in.

Each XTMv virtual machine requires 3 GB of disk space.

Recommended Resource Allocation Settings

	Small Office	Medium Office	Large Office	Datacenter
Virtual CPUs	1	2	4	8 or more
Memory	1 GB	2 GB	4 GB	4 GB or more

Downloading Software

1. Log in to the WatchGuard Portal and select the Articles & Software tab.
2. From the Search section, clear the Articles and Known Issues check boxes and search for available Software Downloads. Select the XTM device for which you want to download software.

There are several software files available for download. See the descriptions below so you know what software packages you will need for your upgrade.

WatchGuard System Manager

All users can now download the WatchGuard System Manager software. With this software package you can install WSM and the WatchGuard Server Center software:

`WSM11_7_4.exe` — Use this file to upgrade WatchGuard System Manager from v11.x to WSM v11.7.4.

Fireware XTM OS

Select the correct Fireware XTM OS image for your XTM device. Use the .exe file if you want to install or upgrade the OS using WSM. Use the .zip file if you want to install or upgrade the OS using the Fireware XTM Web UI. Use the .ova file to deploy a new XTMv device.

If you have….	Select from these Fireware XTM OS packages
XTM 2500 Series	`XTM_OS_XTM800_1500_2500_11_7_4_U1.exe` `xtm_xtm800_1500_2500_11_7_4_U1.zip`
XTM 2050	`XTM_OS_XTM2050_11_7_4_U1.exe` `xtm_xtm2050_11_7_4_U1.zip`
XTM 1500 Series	`XTM_OS_XTM800_1500_2500_11_7_4_U1.exe` `xtm_xtm800_1500_2500_11_7_4_U1.zip`
XTM 1050	`XTM_OS_XTM1050_11_7_4_U1.exe` `xtm_xtm1050_11_7_4_U1.zip`
XTM 800 Series	`XTM_OS_XTM800_1500_2500_11_7_4_U1.exe` `xtm_xtm800_1500_2500_11_7_4_U1.zip`
XTM 8 Series	`XTM_OS_XTM8_11_7_4_U1.exe` `xtm_xtm8_11_7_4_U1.zip`
XTM 5 Series	`XTM_OS_XTM5_11_7_4_U1.exe` `xtm_xtm5_11_7_4_U1.zip`
XTM 330	`XTM_OS_XTM330_11_7_4_U1.exe` `xtm_xtm330_11_7_4_U1.zip`
XTM 33	`XTM_OS_XTM33_11_7_4_U1.exe` `xtm_xtm33_11_7_4_U1.zip`
XTM 2 Series Models 25, 26	`XTM_OS_XTM2A6_11_7_4_U1.exe` `xtm_xtm2a6_11_7_4_U1.zip`

XTMv
All editions for VMware
	`xtmv_11_7_4_U1.ova`
	`xtmv_11_7_4_U1.exe`
	`xtmv_11_7_4_U1.zip`

XTMv All editions for Hyper-V	`xtmv_11_7_4_U1_vhd.zip`

Single Sign-On Software

There are two files available for download if you use Single Sign-On. These files have not been updated for this release.

- `WG-Authentication-Gateway_11_7.exe` (SSO Agent software - required for Single Sign-On and includes optional Event Log Monitor for clientless SSO)
- `WG-Authentication-Client_11_7.msi` (SSO Client software - optional)

For information about how to install and set up Single Sign-On, see the product documentation.

Terminal Services Authentication Software

- `TO_AGENT_SETUP_11_7_4.exe` (This installer includes both 32-bit and 64-bit file support and has been updated for the XTM v11.7.4 release.)

Mobile VPN with SSL Client for Windows and Mac

There are two files available for download if you use Mobile VPN with SSL. These files have not been updated for this release.

- `WG-MVPN-SSL_11_7_3.exe` (Client software for Windows)
- `WG-MVPN-SSL_11_7_3.dmg` (Client software for Mac)

Mobile VPN with IPSec client for Windows

With this release, we now support the Shrew Soft VPN client for Windows v2.2, which you can download from our web site. Shrew Soft has recently released a v2.2.1 client, available on their web site, which introduces a new "Pro" version available at an extra cost with additional features. WatchGuard recommends you use the no-cost Standard version of the client as it includes all functionality supported in the v2.2 VPN client. If you want to use the v2.2.1 client, we recommend you read this Knowledge Base article first.

Upgrade from Fireware XTM v11.x to v11.7.x

When you upgrade an XTM 5 Series or XTM 8 Series to Fireware XTM v11.7.4, the XTM device will reboot twice during the upgrade process. This is expected behavior and specific to this upgrade and these devices only.

Before you upgrade from Fireware XTM v11.x to Fireware XTM v11.7.x, download and save the Fireware XTM OS file that matches the WatchGuard device you want to upgrade. You can use Policy Manager or the Web UI to complete the upgrade procedure. We strongly recommend that you back up your device configuration and your WatchGuard Management Server configuration before you upgrade. It is not possible to downgrade without these backup files.

If you use WatchGuard System Manager (WSM), make sure your WSM version is equal to or higher than the version of Fireware XTM OS installed on your XTM device and the version of WSM installed on your Management Server.

Back up your WatchGuard Management Server Configuration

From the computer where you installed the Management Server:

1. From WatchGuard Server Center, select **Backup/Restore Management Server**.
   The WatchGuard Server Center Backup/Restore Wizard starts.
2. Click **Next**.
   The Select an action screen appears.
3. Select **Back up settings**.
4. Click **Next**.
   The Specify a backup file screen appears.
5. Click **Browse** to select a location for the backup file. Make sure you save the configuration file to a location you can access later to restore the configuration.
6. Click **Next**.
   The WatchGuard Server Center Backup/Restore Wizard is complete screen appears.
7. Click **Finish** to exit the wizard.

General Information for WatchGuard Server Software Upgrades

It is not usually necessary to uninstall your previous v11.x server or client software when you update to WSM v11.7.x. You can install the v11.7.x server and client software on top of your existing installation to upgrade your WatchGuard software components.

If you use a Management Server, you must upgrade it from WSM v6.x or previous to WSM v11.7.x before you upgrade your XTM device.

Upgrade to Fireware XTM v11.7.x from Web UI

1. Go to **System > Backup Image** or use the USB Backup feature to back up your current configuration file.
2. On your management computer, launch the OS software file you downloaded from the WatchGuard Software Downloads Center.
   If you use the Windows-based installer, this installation extracts an upgrade file called *[xtm series]_[product code].sysa-dl* l to the default location of C:\Program Files(x86)\Common files\WatchGuard\resources\FirewareXTM\11.7.4\[model] or [model][product_code].
3. Connect to your XTM device with the Web UI and select **System > Upgrade OS**.
4. Browse to the location of the *[xtm series]_[product code].sysa-dl* from Step 2 and click **Upgrade**.

Upgrade to Fireware XTM v11.7.x from WSM/Policy Manager v11.x

1. Select **File > Backup** or use the USB Backup feature to back up your current configuration file.
2. On your management computer, launch the OS executable file you downloaded from the WatchGuard Portal. This installation extracts an upgrade file called *[xtm series]_[product code].sysa-dl* l to the default location of C:\Program Files(x86)\Common files\WatchGuard\resources\FirewareXTM\11.7.4\[model] or [model][product_code].
3. Install and open WatchGuard System Manager v11.7.4. Connect to your XTM device and launch Policy Manager.
4. From Policy Manager, select **File > Upgrade**. When prompted, browse to and select the *[xtm series]_[product code].sysa-dl* file from Step 2.

Upgrade your FireCluster to Fireware XTM v11.7.x

There are two methods to upgrade Fireware XTM OS on your FireCluster. The method you use depends on the version of Fireware XTM you currently use.

Upgrade a FireCluster from Fireware XTM v11.4.x–v11.6.x to v11.7.x

Use these steps to upgrade a FireCluster from Fireware XTM v11.4.x, v11.5.x, or v11.6.x to Fireware XTM v11.7.x:

1. Open the cluster configuration file in Policy Manager
2. Select **File > Upgrade**.
3. Type the configuration passphrase.
4. Type or select the location of the upgrade file.
5. To create a backup image, select **Yes**.

   A list of the cluster members appears.
6. Select the check box for each device you want to upgrade.

   A message appears when the upgrade for each device is complete.

When the upgrade is complete, each cluster member reboots and rejoins the cluster. If you upgrade both devices in the cluster at the same time, the devices are upgraded one at a time. This is to make sure there is not an interruption in network access at the time of the upgrade.

Policy Manager upgrades the backup member first and then waits for it to reboot and rejoin the cluster as a backup. Then Policy Manager upgrades the master. Note that the master's role will not change until it reboots to complete the upgrade process. At that time the backup takes over as the master.

To perform the upgrade from a remote location, make sure the FireCluster interface for management IP address is configured on the external interface, and that the management IP addresses are public and routable. For more information, see About the Interface for Management IP Address.

Upgrade a FireCluster from Fireware XTM v11.3.x

To upgrade a FireCluster from Fireware XTM v11.3.x to Fireware XTM v11.7.x, you must perform a manual upgrade. For manual upgrade steps, see the Knowledge Base article Upgrade Fireware XTM OS for a FireCluster.

Downgrade Instructions

Downgrade from WSM v11.7.x to WSM v11.x

If you want to revert from v11.7.x to an earlier version of WSM, you must uninstall WSM v11.7.x. When you uninstall, choose **Yes** when the uninstaller asks if you want to delete server configuration and data files. After the server configuration and data files are deleted, you must restore the data and server configuration files you backed up before you upgraded to WSM v11.7.x.

Next, install the same version of WSM that you used before you upgraded to WSM v11.7.x. The installer should detect your existing server configuration and try to restart your servers from the **Finish** dialog box. If you use a WatchGuard Management Server, use WatchGuard Server Center to restore the backup Management Server configuration you created before you first upgraded to WSM v11.7.x. Verify that all WatchGuard servers are running.

Downgrade from Fireware XTM v11.7.x to Fireware XTM v11.x

If you use the Fireware XTM Web UI or CLI to downgrade from Fireware XTM v11.7.x to an earlier version, the downgrade process resets the network and security settings on your XTM device to their factory-default settings. The downgrade process does not change the device passphrases and does not remove the feature keys and certificates.

If you want to downgrade from Fireware XTM v11.7.x to an earlier version of Fireware XTM, the recommended method is to use a backup image that you created before the upgrade to Fireware XTM v11.7.x. With a backup image, you can either:

- Restore the full backup image you created when you upgraded to Fireware XTM v11.7.x to complete the downgrade; or
- Use the USB backup file you created before the upgrade as your auto-restore image, and then boot into recovery mode with the USB drive plugged in to your device. This is not an option for XTMv users.

See the *WatchGuard System Manager Help* or the *Fireware XTM Web UI Help* for more information about these downgrade procedures, and information about how to downgrade if you do not have a backup image.

Some downgrade restrictions apply:
- You cannot downgrade an XTM 2050 or an XTM 330 to a version of Fireware XTM OS lower than v11.5.1.
- You cannot downgrade an XTM 25, 26, or 33 device to a version of Fireware XTM OS lower than v11.5.2.
- You cannot downgrade an XTM 5 Series model 515, 525, 535 or 545 to a version of Fireware XTM OS lower than v11.6.1.
- You cannot downgrade XTMv in a VMware environment to a version of Fireware XTM OS lower than v11.5.4.
- You cannot downgrade XTMv in a Hyper-V environment to a version of Fireware XTM OS lower than v11.7.3.

Resolved Issues

This release resolves a number of problems found in earlier Fireware XTM releases.While most of these issues referenced here were resolved in v11.7.4, we first include the issue resolved in Fireware XTM OS 11.7.4 Update 1.

Issues Resolved in Fireware XTM v11.7.4 Update 1

- Update 1 resolves an issue that caused the Gateway AntiVirus scand process to fail on some devices after a signature update. *[75621]*

General

- SSL compression is no longer enabled for TLS 1.0. *[73093]*
- This release resolves several kernel crashes. *[73560, 73557, 73645]*
- This release resolves a memory leak in the configd process. *[72957]*

Proxies and Subscription Services

- This release offers improved site name detection when you use WebBlocker with the HTTPS proxy. *[63273 65667]*
- The HTTPS proxy now correctly handles Multiple-Domain Certificates. *[73271]*
- HTTP proxy transfer encoding types 'binary', 'gzip' and 'deflate' have been added for better compatibility with websites. *[71334]*
- This release resolves an issue that caused the `spamd` process to crash. *[73517]*
- This release resolves an SMTP proxy crash. *[73861]*

WatchGuard System Manager

- This release resolves an issue that prevented configuration saves from WSM v11.7.2 or v11.7.3 to v11.6.x when a hotspot is configured. *[72831]*
- An issue has been resolved that prevented you from opening a v10.x configuration file on a management computer on which both WSM v10.x and v11.x was installed. *[71065]*
- This release resolves an issue that caused the installation of WSM servers to trigger a reboot without warning to the administrator. *[72653]*
- This release resolves an issue that caused Traffic Monitor to show no data due to invalid characters in an IPS signature match log message. *[73043]*
- This release resolves an issues that caused Traffic Monitor to not show data after a configuration save. *[71953]*

Centralized Management and the Management Server

- This release resolves an issue causing the Management Server Apache process to crash. *[70716]*
- You can now correctly schedule OS upgrades for multiple devices. *[72729]*
- This release resolves an issue that caused the Management Tunnel to be disabled if configured on the Management Server before the device has connected to the Management Server. [*73277]*
- When you use the Management Server to apply changes to a v11.6.x device, you can now successfully change the WebBlocker Uncategorized Settings to **allow**. *[74463]*

WatchGuard AP

- This release resolves an issue that caused the time on the AP 100/200 to revert to an older time when the NTP server was unavailable. *[72972]*

Networking

- The ability to apply DCHP options 66, 67 and 150 is now available for VLANs. *[71444]*
- This release resolves a memory leak that occurred when DHCP is enabled on the external interface but the DHCP server is not responding. *[71738]*
- The ability to support 3G/4G modem failover is now available on XTM 330 and XTM 5 Series devices. *[73047]*
- After a modem failover, traffic is no longer sent out using the IP address of the failed external interface. *[71085]*
- This release resolves an issue that prevented DHCP server from working on an XTM device configured in Drop-In mode. *[72805]*
- You can now correctly add weights and ping probe targets when you configure multi-WAN on XTMv, XTM 5 Series, and all XTM 2 Series devices without a Fireware XTM Pro feature key. *[70479]*

FireCluster

- This release resolves a CPU spike with the wgif static process on the FireCluster Backup Master. *[71278]*
- A new alarm notification has been added to alert when a member of the FireCluster is unavailable. *[70407]*
- The show cluster sync CLI command no longer reports a certificate mismatch for third-party certificates. *[70322]*

Authentication

- When you configure the web server to use for hotspot external guest authentication, you can now specify the session timeout and idle timeout values for user hotspot sessions. *[73338]*
- This release resolves an issue that caused authentication failure when using the TO Agent if the user authenticating is in too many Active Directory groups (resulting in very long group string). *[72652]*

VPN

- The ability to download the OVPN file for use with the iOS and Andriod OpenVPN app is now available. *[72237]*
- The authentication page to download the Mobile VPN with SSL client now sends a “do not remember password” message to the browser. Note that not all browsers honor this message. *[73644]*
- The correct source IP address is now shown in the log file when a Mobile VPN with IPSec user authenticates. *[71951]*
- This release resolves an issue that caused Mobile VPN with IPSec connections to fail to pass traffic due to incomplete route deletion. *[72115]*
- This release resolves an issue that caused Branch Office VPN tunnels to fail after a Multi-WAN failover event when host-based 1-to-1 NAT is also configured. *[72480]*
- This release resolves a crash in the IKED process. *[70577]*
- The option to enable TOS for IPSec now works correctly. *[72975]*
- This release resolves an issue that prevented the XTM 800, XTM 1500, and XTM 2500 Series devices from correctly using the IPSec encryption chipset under certain conditions. *[74785]*

Known Issues and Limitations

These are known issues for Fireware XTM v11.7.4 and all management applications. Where available, we include a way to work around the issue.

General

- If you rename a policy tag from the policy settings configuration, the tag is removed instead of renamed. *[70481]*

> **Workaround**
> You can rename a tag without this issue if you:
> 1. Right-click the policy table and select Policy Tags > Manage > Rename; or
> 2. Use View > Policy Tags > Manage > Rename.

- The "Sysb" version displayed in the Firebox System Manager Status Report will show blank for XTM 2 ,5, 8, and 1050 devices that were manufactured prior to the XTM v11.5.1 release.
- When the level of free memory on your XTM device is lower than 20M, saving your XTM device configuration to the device can cause network disruption. *[64474]*
- To power off an XTM 5 Series device, you must press and hold the rear power switch for 4–5 seconds. *[42459]*
- For XTM 5 Series devices, Interface 0 does not support Auto-MDIX and does not automatically sense cable polarity.
- When you use the **Policy Manager > File > Backup** or **Restore** features, the process can take a long time but does complete successfully. *[35450]*
- Fireware XTM does not support BGP connections through an IPSec VPN tunnel to Amazon Web Services. VPN tunnels that do not use BGP are supported. *[41534]*
- The XTM Configuration Report does not contain all settings. Settings not included are:
  - Secondary interface IP address *[66990]*
  - Configured QoS settings *[66992]*
  - Static MAC bindings *[66993]*
  - IPv6 configuration *[66994]*
- The ETH1 interface on the XTM 830F is a fiber-optic port, so you cannot use the WSM Quick Setup Wizard from a computer with an Ethernet interface. Use a computer with a Fiber NIC, or connect using a switch with both Fiber and Ethernet interfaces. *[59742]*

WatchGuard AP and Gateway Wireless Controller

- In an active/passive FireCluster, the WatchGuard AP reboots each time there is a cluster failover. *[71859]*
- If you use an SSID name of "any", you are not able to get a correct list of connected users in Firebox System Manager or Web UI System Status > Gateway Wireless Controller. *[71614]*
- If you use an SSID name of "any", "on", or "off", the AP device does not broadcast the SSID. *[72965]*
- You cannot use the back tick character ' in the SSID name. *[71904]*
- If you try to set the password for the WatchGuard AP device with the AP device web ui, you cannot use any non-alphanumeric characters in the password. *[71718]*
- It is not possible to change the diagnostic logging level for the Gateway Wireless Controller. *[71836]*

- The Gateway Wireless Controller does not support individual RADIUS shared secrets per AP device in this release. All AP devices must use the same RADIUS shared secret in this release. *[71723]*
- Managed device templates on a WatchGuard Management Server do not support configuration of the Gateway Wireless Controller in this release.
- You cannot pair a WatchGuard AP device to more than one Gateway Wireless Controller/XTM device. If you do, the AP device will fail. *[71920]*
- Occasionally, the Site Survey operation fails to complete until the AP device is first rebooted. *[71944]*

XTMv

- XTMv does not automatically change the self-signed certificate when its serial number changes. *[66668]*

> **Workaround**
> A new self-signed certificate with the correct serial number is generated if you manually delete the certificate from Firebox System Manager > View > Certificates and then reboot the XTMv device.

- If you import the OVA file in VMware Player (which is not officially supported in this release), you must use the "Enter" key on your keyboard to accept the XTMv End User License Agreement (EULA). The **OK** and **Cance**l buttons at the conclusion of the EULA do not appear in VMware Player.

WatchGuard System Manager

- If you use Firebox System Manager to ping across a VPN tunnel, you get a message that reads “No Buffer Space Available.” This is not a memory problem. You see this message if the VPN tunnel is not established. Make sure the VPN tunnel is up and try again. *[59399]*
- WatchGuard System Manager does not display the correct IP address for the default gateway of an XTM device that has no External interface. *[56385]*
- If you install WatchGuard System Manager on a Windows 7 computer and enable XP Compatibility mode during the installation process, any WSM server component you install will not operate correctly. *[56355]*

> **Workaround**
> Do not enable compatibility mode during the WatchGuard System Manager install. If it has already been installed, locate the file C:\Program Files\WatchGuard\wsm11\UninsHs.exe. Right-click on that file, click the Compatibility tab, and clear the option for compatibility mode.

- If you restore a backup image to a managed client device managed by a Management Server, it is possible that the shared secret becomes out of sync.

> **Workaround**
> Connect to the Management Server from WSM. Select the managed device and select **Update Device**. Select the radio button **Reset server configuration (IP address/ Hostname, shared secret**).

- When you run the WSM v11.3.x or higher installer (either the WSM client component only or any selected WSM server components) on Microsoft SBS (Small Business Server) 2008 and 2011 on a computer installed with a 64-bit operating system, you see a Microsoft Windows error "*IssProc.x64 has stopped working*". When you close the error dialog box, the installation completes. *[57133]*

Web UI

- The Fireware XTM Web UI does not support the configuration of some features. These features include:
  - FireCluster
  - Certificate export
  - You cannot turn on or off notification of BOVPN events
  - You cannot add or remove static ARP entries to the device ARP table
  - You cannot get the encrypted Mobile VPN with IPSec end-user configuration profile, known as the .wgx file. The Web UI generates only a plain-text version of the end-user configuration profile, with file extension .ini.
  - You cannot edit the name of a policy, use a custom address in a policy, or use Host Name (DNS lookup) to add an IP address to a policy.
- You cannot change the order of policies with drag-and-drop from the Fireware XTM Web UI. You must use the **Move Up** and **Move Down** buttons. *[70587]*
- If you configure a policy in the Web UI with a status of Disabled, then open Policy Manager and make a change to the same policy, the action assigned to the policy when it denies packets is changed to Send TCP RST. *[34118]*
- You cannot create read-only Mobile VPN with IPSec configuration files with the Web UI. *[39176]*

Command Line Interface (CLI)

- The CLI does not support the configuration of some features:
  - You cannot add or edit a proxy action.
  - You cannot get the encrypted Mobile VPN with IPSec end-user configuration profile, known as the .wgx file. The CLI generates only a plain-text version of the end-user configuration profile, with file extension .ini.
- The CLI performs minimal input validation for many commands.
- For the XTM 2050, the output of the CLI command “show interface” does not clearly indicate the interface number you use in the CLI to configure an interface. The “show interface” CLI command shows the interface number as the interface label on the front of the device (A0, A2 … A7; B0, B1 … B7; C0, C1) followed by a dash, and then the consecutive interface number (0 – 17), for all interfaces. *[64147]*

Workaround
Use the consecutive interface number that appears after the dash as the interface number to configure the interface. For the B1-9 interfaces, the interface number in the CLI command should be in the range 8-15. For the C0-1 interfaces, the interface number in the CLI command should be 16-17.

Proxies

- No log message displays in Firebox System Manager Traffic Monitor when the SMTP proxy processes an email with UTF-8 encoding in the message body. *[70927]*
- Google Maps and Gmail may fail to load if you use the HTTPS proxy with deep packet inspection enabled. *[68267]*
- The Policy Manager and Web UI do not provide any warning that the WebBlocker Override may not work for HTTPS. *[67208]*
- HTTPS DPI (Deep Packet Inspection) does not work for users who use IE 9.0 with TLS 1.1 and 1.2 enabled, but TLS 1.0 and SSL 3.0 not enabled. *[65707]*

Workaround
Use a different browser, or enable TLS 1.0 and SSL 3.0 in your IE 9.0 configuration.

- The XTM device can store only one HTTPS Proxy Server certificate and can protect only one HTTPS web site at a time. *[41131]*
- The ability to use an HTTP caching proxy server is not available in conjunction with the TCP-UDP Proxy. *[44260]*
- When you try to stream YouTube videos from an Apple device running iOS, you may see this error message: "The server is not correctly configured."

Workaround
1. Edit your HTTP proxy policy.
2. Click **View/Edit proxy**.
3. Select the **Allow range requests through unmodified** check box.
4. Save this change to your XTM device.

- The SIP-ALG does not send the Contact header correctly when the Contact header contains a domain name. It only sends an empty string of: Contact: < >. If the Contact header contains an IP address, the SIP-ALG sends the Contact header correctly: Contact: <sip:10.1.1.2:5060>. *[59622]*

Workaround
Configure the PBX to send the Contact header with an IP address, not a domain name.

Security Subscriptions

- If you use WatchGuard System Manager v11.7.4 to manage an XTM device running v11.7.2 or v11.7.3, you must use Fireware XTM Web UI to change spamBlocker thresholds.You cannot use Policy Manager.
- If you change the DNS configuration on your XTM device, you must restart the XTM device or re-save your configuration to your XTM device for spamBlocker to work correctly. *[71532]*
- Some IPS signature information, such as the CVE number, is not available in Firebox System Manager. We provide search capabilities and CVE information for IPS signatures on a web security portal for IPS on the WatchGuard web site, which you can access at http://www.watchguard.com/SecurityPortal/ThreatDB.aspx
- Skype detection blocks only new Skype sessions. If a user is already logged in to Skype and a Skype session is already started when Application Control is enabled, Application Control may not detect the activity.
- You cannot use a WebBlocker Server through a branch office VPN tunnel. *[56319]*

Networking

- A user-defined alias cannot have the same name an XTM device interface. *[73198]*
- XTM devices can send and respond to IPv6 ping requests, however, the -6 flag is not supported by Firebox System Manager > Diagnostic Tasks. *[71631]*

Workaround
Connect to the XTM device with the CLI to use IPv6 ping.

- When you configure a 1-to-1 NAT rule, you cannot use an IP address that is already configured as a secondary network IP address. If you try to do this, incoming policies that handle IPSec traffic will not correctly pass the IPSec traffic. *[66806]*
- Although you can configure the XTM device to override the MAC address for an interface from the UI, this option does not work for XTM devices configured in Bridge or Drop-in mode. *[70721]*
- When you add or remove an Link Aggregation member, traffic through the LA interface stops for 20-34 seconds. *[69568]*
- To change an interface used in a branch office VPN configuration from a physical interface to a link aggregation interface, you must first remove the physical interface from the branch office VPN configuration, then configure the link aggregation interface, and then edit the branch office VPN configuration again to use the link aggregation interface. [*70133]*
- Policy Checker does not work when your XTM device is configured in Bridge mode. *[66855]*
- You cannot configure traffic management actions or use QoS marking on VLANs. *[56971, 42093]*
- You cannot bridge a wireless interface to a VLAN interface. *[41977]*
- The Web Setup Wizard can fail if your computer is directly connected to an XTM 2 Series device as a DHCP client when you start the Web Setup Wizard. This can occur because the computer cannot get an IP address quickly enough after the device reboots during the wizard. *[42550]*

Workaround
1. If your computer is directly connected to the XTM 2 Series device during the Web Setup Wizard, use a static IP address on your computer.
2. Use a switch or hub between your computer and the XTM 2 Series device when you run the Web Setup Wizard.

- Any network interfaces that are part of a bridge configuration disconnect and re-connect automatically when you save a configuration from a computer on the bridge network that includes configuration changes to a network interface. *[39474]*
- When you configure your XTM device with a Mixed Routing Mode configuration, any bridged interfaces show their interface and default gateway IP address as 0.0.0.0 in the Web UI. *[39389]*
- The dynamic routing of RIPv1 does not work. *[40880]*

Multi-WAN

- If you select the gradual failback as the multi-WAN failback for active connection settings, failback continues to occur immediately. *[63932]*
- The multi-WAN sticky connection does not work if your device is configured to use the multi-WAN Routing Table mode. *[62950]*

XTM Wireless

- If a connection from a user on the XTM 2 or 3 Series Wireless Guest Network matches a policy with Any-Trusted in the From field, that connection is handled by that policy if that policy has higher precedence than a policy that specifies WG-Wireless-Guest in the From field. *[69328]*

Workaround
Make sure that any policies that specify WG-Wireless-Guest access control for any port and protocol have higher precedence than matching policies with Any-Trusted in the From field. You can do this several ways:
1. In Policy Manager, use **View > Auto-Order mode** to disable Auto-Order Mode and then manually move the policies for WG-Wireless-Guest above the matching Any-Trusted policies in the list.
2. For any policy with Any-Trusted in the From field, remove that alias and manually add the specific interface alias or network IP address for all desired Trusted networks.

- When you open a configuration in which the Hotspot feature is enabled for a wireless interface, the configuration could become corrupt. When this occurs, you cannot save the configuration to an XTM device running v11.7.2 or higher. *[72831]*

Workaround
Go to Setup > Authentication > Hotspot and select the wireless interface. Save the configuration to the XTM device.

- The XTM device may redirect the client browser to the authentication page of the external web server again instead of to the page that they originally requested even though they have successfully authenticated. *[64760]*
- When you configure the wireless guest network on your XTM device, or bridge a wireless interface to any trusted or optional network, these networks cannot be used in a policy in a Management Server template. *[62455]*

Workaround
In your template, create an alias that has the same name as the wireless alias created when you enabled your wireless interface.

Authentication

- If you use Active Directory (AD) authentication for Terminal Services users, a mismatch in capitalization (case) between the domain name configured in **Setup > Authentication > Servers** and your actual AD server can cause a failure to apply policies correctly to the users. *[72721]*
- Citrix 4.5/5.0 servers installed in VMware do not work with Terminal Server Single Sign-On. *[66156]*

Workaround
This feature works with Citrix 6.0 and 6.5 servers installed in VMware.

- Clientless SSO is not supported on a TLS-Enabled Active Directory environment.
- Terminal Services authentication is not supported in an active/active FireCluster environment. *[70099]*
- It is not possible to use the *Automatically redirect users to the authentication page* authentication option together with Terminal Services authentication.
- To enable your XTM device to correctly process system-related traffic from your Terminal or Citrix server, the Terminal Services Agent uses a special user account named Backend-Service. Because of this, you may need to add policies to allow traffic from this user account through your XTM device. You can learn more about how Backend-Service operates in the product help system.

- For the Authentication Redirect feature to operate correctly, HTTP or HTTPS traffic cannot be allowed through an outgoing policy based on IP addresses or aliases that contain IP addresses. The Authentication Redirect feature operates only when policies for port 80 and 443 are configured for user or user group authentication. *[37241]*

Centralized Management

- Each time you make a change to the hotspot configuration of a fully managed device, you see an unnecessary warning that you can safely ignore. *[71938]*
- Link aggregation interfaces are not correctly added as VPN resources for managed VPN tunnels when you add an XTM device configured to use Link aggregation to your Management Server. *[70672]*
- There is no option to set up a Traffic Management action in an XTM v11.x Device Configuration Template. *[55732]*
- If you used Centralized Management with devices subscribed to templates in earlier versions of WSM, when you upgrade from WSM 11.x to v11.4 or higher, these templates are updated and the devices are no longer subscribed. Each device retains its template configuration. Existing templates are updated to use "T_" in their object names (to match the object names in the devices that used to subscribe to them). After you upgrade, you'll see the template upgrade that occurs during upgrade in your revision history.

FireCluster

- If you use the Firebox System Manager **Tools > Cluster > Leave** command to make a device leave a FireCluster, and then start the device in safe mode, the device cannot be discovered by the cluster master as a cluster member. *[72165]*

> **Workaround**
> Use the FireCluster management IP address to connect directly to the device and use the Firebox System Manager **Tools > Cluster > Join** command to rejoin the device to the cluster.

- You are not warned if you try to create a FireCluster with two wireless devices and you have not yet enabled the DHCP server on the bridge interface. *[69483]*
- You cannot use the secondary IP address of an XTM device interface to manage a FireCluster configured in active/active mode. *[64184]*

> **Workaround**
> Use the primary IP address of an XTM device for all management connections to an active/active FireCluster.

- If the Log Server cannot be reached from the management IP addresses, only the current FireCluster master will be able to connect. This can occur if the Log Server is connected through an External network, but the management IP addresses are on a Trusted or Optional network. *[64482]*
- If a monitored link fails on both FireCluster members, the non-master member is switched into passive mode and consequently does not process any traffic. A multi-WAN failover caused by a failed connection to a link monitor host does not trigger FireCluster failover. FireCluster failover occurs only when the physical interface is down or does not respond.
- Each XTM device has a set of default IP addresses assigned to the device interfaces in a range starting with 10.0.0.1. The highest default IP address depends on the number of interfaces. If you set the IP address of the Primary or Backup cluster interface to one of the default IP addresses, both devices restart, and the backup master becomes inactive. *[57663]*

Workaround
Do not use any of the default IP addresses as the Primary or Backup cluster interface IP address.

- When you have an active/active FireCluster and use the WebBlocker Override feature, you may be prompted to enter your override password twice. *[39263]*
- Every network interface enabled in a FireCluster is automatically monitored by FireCluster. You must make sure that all enabled interfaces are physically connected to a network device.
- If you use the Mobile VPN with IPSec client from the same network as the external network address configured on your FireCluster, some traffic may not go through the VPN tunnel. *[38672]*
- Mobile VPN with PPTP users do not appear in Firebox System Manager when you are connected to a passive FireCluster member. PPTP is only connected to the active Firebox when using an active/passive FireCluster. *[36467]*
- It is not possible to use a VLAN interface IP address for a FireCluster management IP address. *[45159]*
- To perform a manual upgrade of a FireCluster from v11.3.x to a later version of Fireware XTM OS, the management computer must be on the same network as the FireCluster management IP addresses. *[63278]*

Logging and Reporting

- When you change the log level for your WatchGuard Log Server and click **Apply**, the change does not take effect. *[60088]*

Workaround
1. In WatchGuard Server Center, on the Log Server Logging tab, change the log level for log messages from the Log Server and click **Apply**.
2. In the Servers tree, right-click Log Server and select **Stop Server**. In the confirmation message, select **Yes**.
3. Right-click Log Server again and select **Start Server**.

- The Denied Packets Summary report is not yet available in Report Manager. *[63192]*
- The PDF output of the Web Activity Trend report does not include time labels on the x-axis when viewed in Report Manager. Date and time information is included in the table below the report. *[64162]*
- When you upgrade from Fireware XTM v11.4.x, reports generated near the time of the upgrade may not show up in Report Manager. *[64325]*
- If a daily report schedule name includes a colon or certain other characters (for example: "1:35"), the system returns an error. *[63427]*

Workaround
Make sure that your report schedule names use only characters that are valid in Windows file names. You can find valid characters in articles such as http://msdn.microsoft.com/en-us/library/windows/desktop/aa365247%28v=vs.85%29.aspx .

- There are two sorting issues in Report Manager. When you sort by Destination, the field sorts by IP address and not the destination host name (if available). When you sort by Disposition, some items in the "deny" state do not sort accurately within groups. *[62879]*
- Any configured daily or weekly “Archived Reports” you have in your v11.3 configuration are automatically converted to scheduled reports after you upgrade to WSM v11.4 or higher.

Mobile VPN

- You can configure LDAP, Active Directory, and SecurID authentication methods for Mobile VPN with L2TP from the Web UI, but these authentication methods are not supported for L2TP. *[70818]*
- If a BOVPN is configured to use Main Mode for Phase 1, and has a dynamic remote gateway IP address, Mobile VPN with L2TP may not work correctly. Policy Manager prevents this configuration, but Web UI and CLI do not. WebUI and CLI also do not display an error message when you try to configure L2TP if a BOVPN is already configured in that way. *[70588]*

> **Workaround**
> Use Aggressive Mode for any BOVPN with a dynamic gateway IP address.

- You cannot use an encryption password of "password" in the WatchGuard Mobile VPN app for iOS. *[70510]*
- Mobile VPN with L2TP clients cannot connect using x509 certification as their authentication method. *[70642]*
- You must restart your XTM device after you change the DNS server settings configured on the XTM device before Mobile VPN with L2TP clients can use the new DNS server settings. *[70571]*
- Mobile VPN with SSL does not work when bridged to a wireless interface. *[70267]*
- You cannot make an L2TP connection with an IPSec pre-shared key when the L2TP tunnel passes through a device configured for static NAT. *[69350]*
- The L2TP configuration does not sync correctly from a master XTM device to a backup XTM device in an active/passive FireCluster. *[69776]*
- If you use the Mobile VPN app for iOS, your web browser opens after you install the profile. You can close the web browser to continue.
- Occasional issues have been reported with the Mobile VPN app for Android on Samsung Galaxy II phones over 3G connections.
- You cannot generate a Mobile VPN with IPSec configuration file when the group name contains the characters the asterisk or period characters(*, .). *[66815]*
- When you use the built in IPSec client from an iPhone or iPad, the client connection will disconnect when the connection duration reaches 1 hour and 45 minutes. This is caused by a limitation in the Cisco client used by iPhone/iPad. You must reconnect the IPSec client to reestablish the VPN tunnel. *[63147]*
- Mobile VPN with PPTP connections from Android mobile devices do not work consistently on 3G mobile networks. *[63451]*
- Connections from the Mobile VPN with IPSec client can route through the wrong external interface when the XTM device is configured for multi-WAN in round-robin mode. *[64386]*
- You cannot configure Mobile VPN with SSL to bridge network traffic to a bridged interface. *[61844]*
- Mobile VPN with SSL users cannot connect to some network resources through a branch office VPN tunnel that terminates on an active/active FireCluster. *[61549]*
- You cannot ping the IP address of the XTM device interface to which a Shrew Soft VPN client established a VPN tunnel. You can ping computers on that network, but not the interface IP address itself. *[60988]*
- Shrew Soft VPN client connections can drop if there are multiple clients connected to an XTM device at the same time issuing Phase 2 rekeys. *[60261*]

- Phase 1 rekeys initiated by the Shrew Soft VPN client cause the client to be disconnected, if connected more than 24 hours. In this case, we recommend that you set the rekey on your XTM device to 23 hours -- one hour shorter than the rekey hard-coded in the Shrew Soft client configuration. This forces the XTM device to initiate the rekey, and gives the client a notification that the tunnel must be re-established. *[60260, 60259]*
- The Mobile VPN for SSL Mac client may not be able to connect to an XTM device when the authentication algorithm is set to SHA 256. *[35724]*

Branch Office VPN

- To change an interface used in a branch office VPN configuration from a physical interface to a link aggregation interface, you must first remove the physical interface from the branch office VPN configuration, then configure the link aggregation interface, and then edit the branch office VPN configuration again to use the link aggregation interface. [*70133]*
- Manual branch office VPN fails when the pre-shared key exceeds 50 characters. *[65215]*
- Do not use the same name for both a VPN Gateway and a VPN Tunnel. *[66412]*
- When you configure your XTM device in multi-WAN mode, you must select which interfaces to include in your multi-WAN configuration. If there are any interfaces that you choose not to include in your multi-WAN configuration (i.e. you clear the check box for that interface), the system does not create a route for that network. This can cause a problem if you have a branch office VPN configured to include that same interface. In this case, the VPN tunnel can fail to negotiate with its remote peer. *[57153]*

> **Workaround**
> If you use multi-WAN and have problems with your branch office VPN tunnels failing to negotiate with their remote peers, you must open your multi-WAN configuration and select Configure adjacent to your chosen multi-WAN configuration mode. Make sure that the appropriate interfaces are included in your multi-WAN configuration.

- A branch office VPN tunnel does not pass traffic if an inbound static NAT policy that includes IP 50 and IP 51 protocols exists for the external IP address of the XTM device. [*41822]*
- Managed branch office VPN tunnels cannot be established if the CRL distribution point (for example, the WatchGuard Management Server or a third-party CRL distribution site you use) is offline. *[55946]*
- The use of *Any* in a BOVPN tunnel route is changed in Fireware XTM. If a branch office VPN tunnel uses Any for the Local part of a tunnel route, Fireware XTM interprets this to mean network 0.0.0.0 and subnet mask 0.0.0.0 (in slash notation, 0.0.0.0/0). If the remote IPSec peer does not send 0.0.0.0/0 as its Phase 2 ID, Phase 2 negotiations fail. *[40098]*

> **Workaround**
> Do not use *Any* for the Local or the Remote part of the tunnel route. Change the Local part of your tunnel route. Type the IP addresses of computers behind the XTM device that actually participate in the tunnel routing. Contact the administrator of the remote IPSec peer to determine what that device uses for the Remote part of its tunnel route (or the Remote part of its Phase 2 ID).

- If you have a large number of branch office VPN tunnels in your configuration, the tunnels may take a long time to appear in Policy Manager. *[35919]*

Workaround
From Policy Manager, select **View > Policy Highlighting**. Clear the **Highlight Firewall policies based on traffic type** check box.

Using the CLI

The Fireware XTM CLI (Command Line Interface) is fully supported for v11.x releases. For information on how to start and use the CLI, see the *CLI Command Reference Guide*. You can download the latest CLI guide from the documentation web site at http://www.watchguard.com/help/documentation/xtm.asp.

Technical Assistance

For technical assistance, contact WatchGuard Technical Support by telephone or log in to the WatchGuard Portal on the Web at http://www.watchguard.com/support. When you contact Technical Support, you must supply your registered Product Serial Number or Partner ID.
